Odyssey Sa  
Model 9260

The Odyssey Sa Infrared Imaging System offers the advantages of infrared imaging and the flexibility to handle both plate-based assays and quantitative Western blots.

For walk-away automation with plate-based assays, the Odyssey Sa can be configured to work with a 30- or 50-plate automated stacking system. The Odyssey Sa also accepts individual membranes or gels providing an affordable solution for labs doing quantitative Western blots and In-Cell Western™ assays. It is also ideal for drug screening assays with high-throughput needs.

Applications for the Odyssey Sa include:

- Quantitative Western blots
- In-Cell Western assays
- On-Cell Western assays
- RNAi screens
- ELISAs and other plate-based assays
- Protein (Coomassie) gel imaging and documentation
- Nucleic acid gel imaging and documentation (when using a near-infrared DNA stain)
- Tissue section imaging
